Target version:		Spent time:	0.00 hour
Description			
<p>This is a single use function, specific to the Blowfish implementation.</p> <p>It is marked as deprecated/legacy and has the following comment, "Convert to little-endian, this is needed here and not in above auto-tests because BF_ecb_encrypt above correctly converts from big to little endian, and EncipherBlock does not!".</p> <p>Further we should note, it assumes the endianness without documenting the proof.</p> <p>The re-write should address the above and be sufficient for IP clearance.</p>
