

CipherShed - Feature #82

add sparse file detection to non-windows versions

01/14/2015 10:05 PM - Jason Pyeron

Description			
Quote from the manual: On Linux or Mac OS X, if you intend to create a hidden volume within a file-hosted CipherShed volume, make sure that the volume is not sparse-file-hosted (the Windows version of CipherShed verifies this and disallows creation of hidden volumes within sparse files).>
